Get started [Info](#)

Choose your starting point

☒ **Register a domain**

Register the name, such as example.com, that your users use to access your application.

☐ **Transfer domain**

You can transfer domain names to Route 53 that you registered with another domain registrar.

☐ **Create hosted zones**

A hosted zone tells Route 53 how to respond to DNS queries for a domain such as example.com.

☐ **Configure health checks**

Health checks monitor your applications and web resources, and direct DNS queries to healthy resources.

☐ **Configure traffic flow**

A visual tool that lets you easily create policies for multiple endpoints in complex configurations.

☐ **Configure resolvers**

A regional service that lets you route DNS queries between your VPCs and your network.

Address 2 - optional

Once you buy the domain you will find it in

Domains

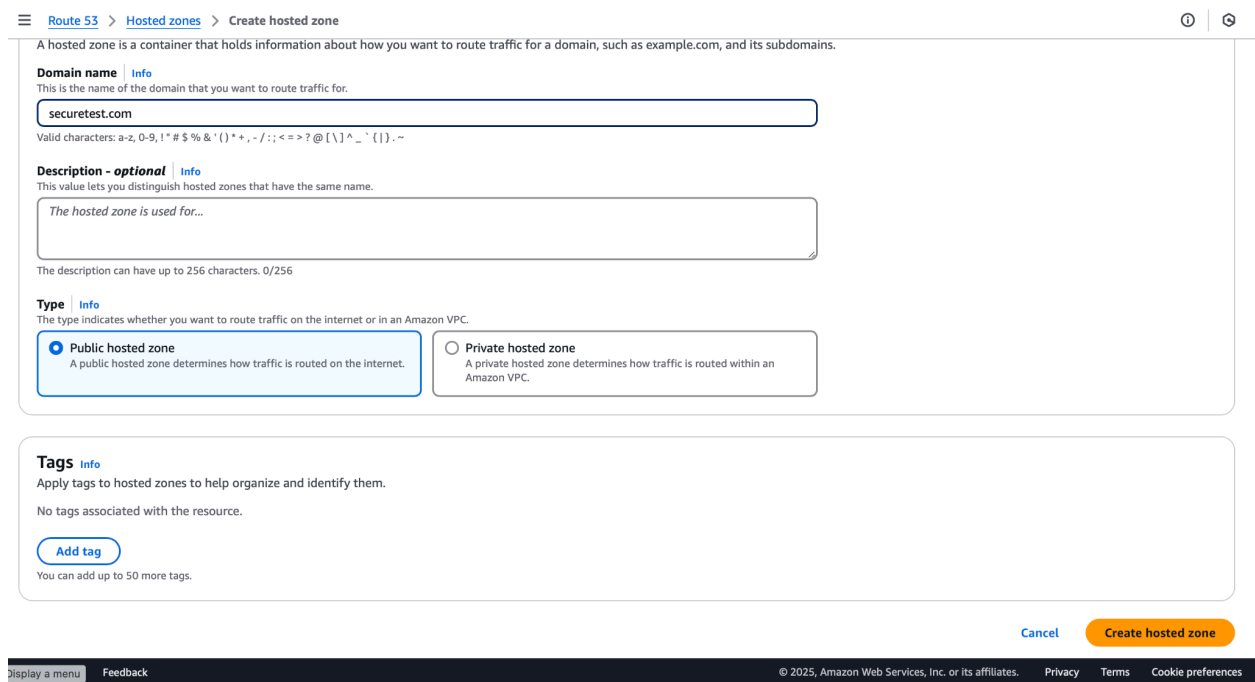

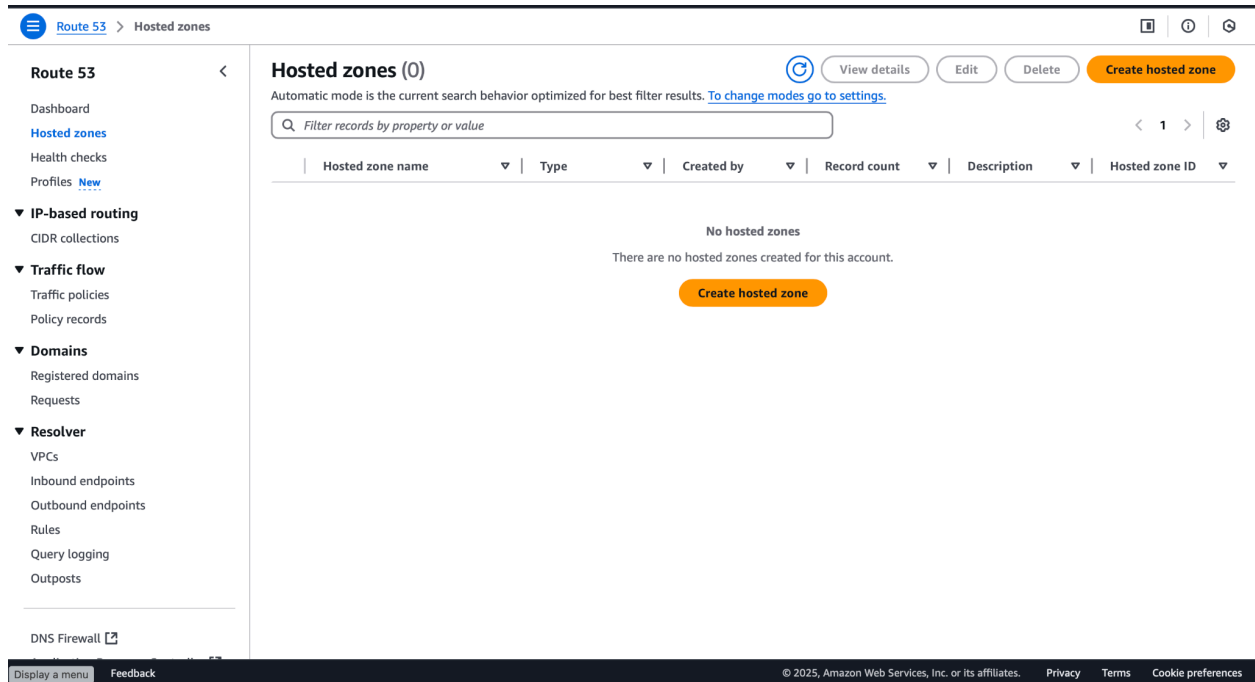

Registered domains

You can go to route53 and you will see the hosted zone created.

You can create records under the hosted zone

- **A Record:** Maps a domain name to an IPv4 address.
- **AAAA Record:** Maps a domain name to an IPv6 address.
- **CNAME Record:** Alias for another domain name.
- **MX Record:** Specifies mail servers for the domain.
- **TXT Record:** Stores text data for purposes like verification or configuration.
- **SRV Record:** Specifies services offered by the domain.
- **NS Record:** Lists authoritative name servers for the domain.
